

AI Readiness Assessment (High Level)

Assess logic. Validate value. Choose the right starting point.

The Challenge

Leadership teams are expected to pursue AI initiatives without a shared, evidence-based understanding of readiness, risk, or where to begin. Key challenges include:

- Treating AI as technology rather than organisational change
- Applying AI within industrial-age structures that cannot support it
- Misalignment between strategy, governance, and operating reality
- Uncertainty around ethical, regulatory, and operational risk
- No clear, evidence-based way to prioritise starting points

The Solution

The AI Readiness Assessment is a rapid diagnostic designed to establish a clear, evidence-based starting point for responsible AI adoption. Our approach includes:

- Leadership alignment assessment on purpose, ambition, and risk appetite
- High-level review of data logic and information flows
- Cultural pulse check covering skills, sentiment, and shadow AI
- Red / Amber / Green readiness rating across key dimensions
- Identification of safe, credible early opportunities

The Outcome

A clear, shared view of readiness that enables confident decisions on whether to proceed, pause, or re-sequence investment. This delivers:

- Shared leadership understanding of AI readiness
- Clear Red / Amber / Green readiness scorecard
- Visibility of immediate risks and structural blockers
- Prioritised opportunities for responsible early progress
- Confidence in next steps and sequencing

Our Core Services

1

Executive Alignment Workshop

Focused assessment of leadership alignment on AI purpose, ambition, and risk appetite.

Aligns AI activity with strategic intent

2

Data & Logic Pulse

High-level review of data accessibility, quality, and information flows relevant to AI use.

Prevents pilot failure caused by weak data foundations

3

Cultural Readiness Check

Assessment of workforce sentiment, skills gaps, shadow AI usage, and change readiness.

Surfaces adoption risk before it becomes resistance

4

Opportunity Prioritisation

Identification of contained, high-value use cases suitable for safe, early AI experimentation.

Creates a credible entry point for adoption

Why ITAA.ai?

- Organisational logic first, not technology led
- Independent and vendor-neutral, focused on your interests
- Governance-led, with responsible AI at the core
- Human-centred: people, capability and culture
- Senior delivery from Alan King and the ITAA.ai team
